01

# INTRODUCTION

---

# Why Do We Need Another Recommender?

Finding new music on Spotify is difficult:

- Only top artists are easily discoverable
- Large library that gets updated daily
- Foreign music is hard to search for

Makes it very difficult for new artists to get recognized

---

# Spotify's New Releases

## New Music Friday

New music from Ariana Grande, 24kGoldn, Conan Gray, and more!

3,707,128 FOLLOWERS

## Release Radar

Catch all the latest music from artists you follow, plus new singles picked for you. Updates every Friday.

MADE FOR JESSE.P.TAO

# Everynoise New Releases

## 17162 USA Releases

- 🔔 Ariana Grande *Positions (Deluxe)* 19
- 🔔 YoungBoy Never Broke Again *It Ain't Over 2* 🔄
- 🔔 YoungBoy Never Broke Again *Toxic Punk 3* 🔄
- 🔔 Trippie Redd *Pegasus: Neon Shark vs Pegasus Presented By Travis Barker (Deluxe)* 40
- 🔔 Chris Brown *Go Crazy (Remix)* (feat. Future, Lil Durk & Mulatto)
- 🔔 Marshmello *Lavandia*
- 🔔 The Beatles *The Beatles For Kids - Animals 6* 🔄
- 🔔 NF *CLOUDS*
- 🔔 NF *CLOUDS (Edit)*
- 🔔 Florida Georgia Line *Life Rolls On (Deluxe)* 17
- 🔔 Brent Faiyaz *Eden* (From "Black History Always / Music For the Movement Vol. 2")
- 🔔 Tory Lanez *F.E.E.L.S.* (feat. Chris Brown)
- 🔔 Lil Yachty *Hit Bout It*
- 🔔 Kevin Gates *Only The Generals Part II* 12
- 🔔 24kGoldn *3, 2, 1*
- 🔔 Rauw Alejandro *2/Catorce*
- 🔔 Russ *MISUNDERSTOOD*
- 🔔 Jason Derulo *Lifestyle* (feat. Adam Levine) (David Guetta Slap House Mix)
- 🔔 AJR *Way Less Sad 4*
- 🔔 Conan Gray *Overdrive*
- 🔔 David Guetta *Let's Love* (feat. Sia) (Aazar Remix)
- 🔔 ILLENIUM *Hearts on Fire (The Remixes) 4*
- 🔔 Mariah Carey *We Belong Together (Mimi's Late Night Valentine's Mix) 2* 🔄
- 🔔 CJ *Loyalty Over Royalty 8*
- 🔔 Young Dolph *Case Closed*
- 🔔 Powfu *the way that you see me* (feat. Ayleen Valentine)
- 🔔 Wallows *Quarterback*
- 🔔 Wallows *Remote (Deluxe)* 11
- 🔔 Denzel Curry *So.Incredible.pkg* [Robert Glasper Version Feat. Smino]
- 🔔 Nelly *Lil Bit (FGL Remix)*
- 🔔 Nelly *Country Grammar (Live)* 14
- 🔔 David Bowie *That's Entertainment (2021 Version) / Cosmic Dancer (Live)* 2
- 🔔 El Fantasma *Carteles* 10
- 🔔 Johann Sebastian Bach *Bach: Toccata in G Major, BWV 916*
- 🔔 Johann Sebastian Bach *Hooked on MIDI, Vol. 1 7*
- 🔔 Johann Sebastian Bach *I Love Bach* 200 🔄
- 🔔 Johann Sebastian Bach *Johann Sebastian Bach: Sonate e partite per il flauto traversiere* 16
- 🔔 Johann Sebastian Bach *Prisme- Bach* 20
- 🔔 Alan Walker *Fake A Smile*
- 🔔 John Williams *The Adventures of Tintin: The Duel*

# 02 Data Collection

---

# Process

## Step 1

Collect New Releases  
from Everynoise

## Step 2

Use Spotify API to get  
popularity of artists

## Step 3

Use SpotDL to  
download audio files or  
Spotify API to get audio  
features

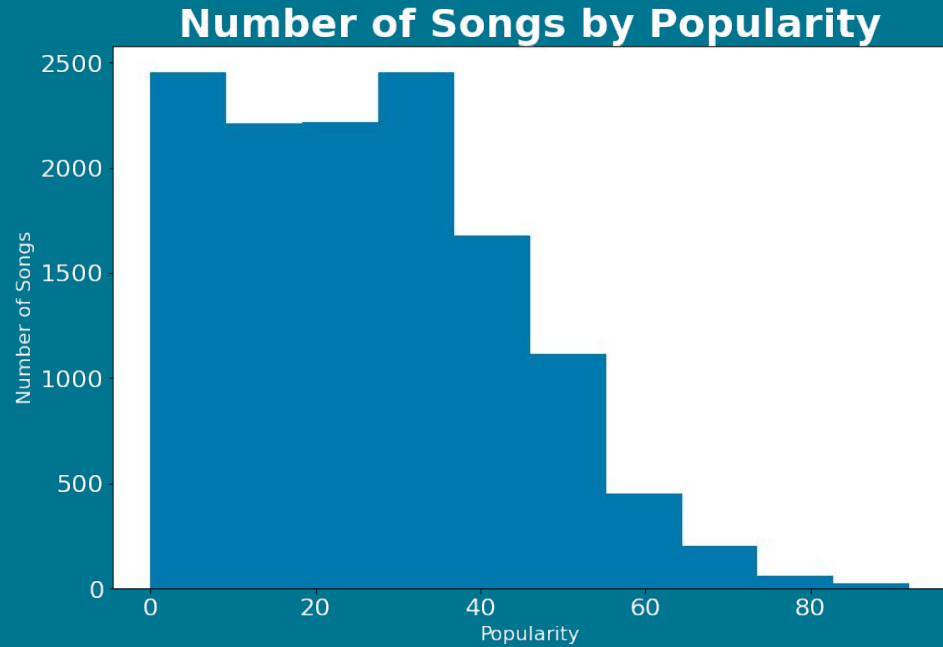

## Step 4

Feed audio files or  
features into model

# It's Hard to Get Popular

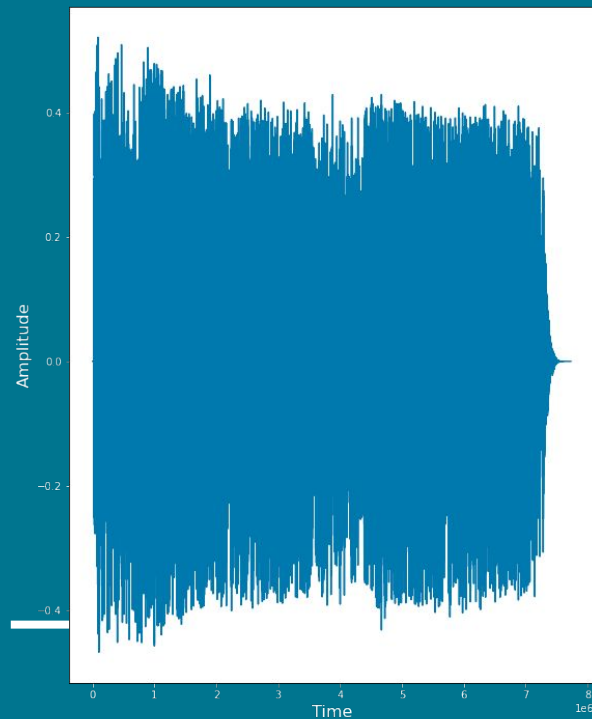

03

# Initial Model

# Initial Look at Audio Files

## Audio Waveforms

# Trimming Audio

## Trimmed Audio Waveforms

# More Fourier Transforms

# More Fourier Transforms

Equation for Fourier transform:

$$\hat{f}(\xi) = \int_{-\infty}^{\infty} f(x) e^{-2\pi i x \xi} dx,$$

- Allows signals to be converted from time to frequencies
- Main disadvantage is we lose all time component of signal
- Luckily, we have the Short-Time Fourier Transform (STFT):

$$X(\tau, \omega) = \int_{-\infty}^{\infty} x(t) w(t - \tau) e^{-i\omega t} dt$$

- Keeps some of our time component of signal using windowing
-

# Visualizing STFT

# Scaling STFT

# MFCCs

# Using Cosine Similarity

- Make sure signals are changed to be equal length
- Using the cosine similarity metric
- Takes nearly 2 hours just to calculate all cosine similarities

# Using DTW

- Signals do not have to be changed to be equal length
- Much fairer comparison between 2 audio tracks of different length
- Regular DTW algorithm takes about 5 seconds per comparison
- FastDTW algorithm was used for performance

# DTW is Fast, but Still Slow

04

# Improved Model

---

# Spotify API Audio Features

- Danceability, energy, key, loudness, mode, speechiness, acousticness, instrumentalness, liveness, valence, tempo, duration, time signature
- Removed songs by artists with over 70 popularity
- Only takes 2 seconds to compare all tracks

# Model Training Times Comparison

	Data Retrieval	Preprocessing	Training
Audio File Cosine Similarity	1 Day	1 Hour	80+ Hours
Audio File DTW	1 Day	1 Hour	40+ Hours
Spotify API Features	20 Minutes	10 Seconds	2 Seconds

---

# Pros and Cons of Audio File Model

## Pros

- Can actually see what we are comparing
- Uses interesting machine learning algorithms

## Cons

- Long preprocessing and training times
- Only songs that are available on Youtube Music can be compared

# Pros and Cons of Spotify API Model

## Pros

- Really quick preprocessing and training times
- All new releases on Spotify can be recommended

## Cons

- No knowledge of how numbers for audio features are defined
  - Relies purely on the difference between these arbitrary features
-

# 05 Live Demo!

---

A decorative vertical bar on the left side of the slide, composed of a series of overlapping squares and circles in teal, dark blue, light blue, and white. Some circles are solid, while others are semi-transparent or have different fill patterns.

# Conclusions

---

## What did we learn?

- Comparing audio files is an arduous process that even GPUs struggle to do quickly
  - We ended up having to just use simple numbers to build a recommender due to these challenges
  - Building a robust web app that accommodates different user's is difficult
-

## Further Steps

- Create interaction terms between Spotify API Audio Features to see if our recommender improves
  - Use speech recognition with our Audio File modeling to see if we can use NLP to recommend songs
  - Build our own features from our Audio File analysis so we don't have to rely on Spotify API's audio features
  - Classify audio into genres as Spotify's API does not include the genre of a song
  - Create another page where users can see more recommendations
  - Use user's ratings on recommendations to recommend songs to similar users
  - Write code that takes better advantage of the GPU using TensorRT or CUDA in C/C++
  - Expand this model to Apple Music, Google Play Music, other music streaming services
-
